Mission. The Indiana Invasive Species Council (IISC) was established by the state legislature to enhance the ability of government agencies to detect, prevent, monitor, and manage new and long established invasions, as well as increase public awareness about invasive species.

Indiana Invasive Species Council - Entomology

Native to Southeast Asia, Burmese pythons are an exotic (nonnative) species in South Florida. They are also an invasive species, which means that they are not constrained by natural factors as much as they were in their native habitat. Invasive species have the potential to harm their new environments. The release of Burmese pythons in South Florida is especially troublesome because the ...

Burmese Pythons in South Florida: Scientific Support for

The Global Invasive Species Database was developed and is managed by the Invasive Species Specialist Group (ISSG) of the Species Survival Commission (SSC) of the International Union for Conservation of Nature (IUCN).It was developed as part of the global initiative on invasive species led by the erstwhile Global Invasive Species Programme (GISP) in 2000.

Statewide Control and Management Efforts. Statewide efforts are underway by a variety of state and local groups, trying to address invasive species of all kinds throughout Michigan.

Invasive Species Control & Management - michigan.gov

Many invasive animal species are listed in schedules 5 and 6 of the Wildlife Act 1953. Those in Schedule 5 have no protection and may be killed. Those in Schedule 6 are declared to be noxious animals and subject to the Noxious Animals Act 1956. In 2016 the New Zealand government introduced Predator Free 2050, a project to eliminate all non-native predators (such as rats, possums and stoats) by 2050.

Invasive species in New Zealand - Wikipedia

The impact of exotic invasive species on our forests in the U.S. is staggering. Effects of these unwanted invaders can affect human and ecosystem health, forest products, property values and outdoor recreation opportunities.

Michigan Invasive Species Coalition

Invasive species in the Everglades are exotic plants and animals that are not native to the area and have aggressively adapted to conditions in wilderness areas in southern Florida. The Everglades are a massive watershed in the southern portion of the U.S. state of Florida that drains overflow from the vast shallow Lake Okeechobee that is in turn fed by the Kissimmee River.

List of invasive species in the Everglades - Wikipedia

Invasive plants are species intentionally or accidentally introduced by human activity into a region in which they did not evolve and cause harm to natural resources, economic activity or humans. The list is for educational purposes only and has no regulatory authority. To be included on the list ...
