Moisture Related Reliability in Electronic Packaging

In general, the drop reliability of a board-level electronic package is characterized by the number of drops to failure according to a certain failure criterion. This implies that damage of solder joints evolves during each drop and eventually leads to failure.

Reliability estimation for electronic designs Page 3 of 12 Introduction: Reliability is a probability that a product will operate satisfactorily for a required amount of time under stated conditions. Reliability is commonly quantified in terms of MTBF. Mean Time Between Failures (or MTBF) is arithmetic mean value of session
