Push and pull, play with each machine. Apply an input force by tapping or dragging each machine. Observe
how the machine reacts to the input. Make a change to each machine. Alter each simple machine: move the
fulcrum on the lever, add a pulley, change the length or height of an inclined plane, select screws with
different threads, and try other wheel and wedge sizes.

When you turn the cap one way, it opens. If you turn it the other way, it seals the bottle shut. The cap is a
screw. A lever is a bar that pivots or turns on a fixed point. The fixed point is called the fulcrum. Have you
ever played on a seesaw? The seesaw is a lever. The support in the middle is the fulcrum. A pulley is a
wheel that is used with a cord or rope.

A machine can multiply force but never energy! NO WAY! input work = output work only when there is no
friction. In the real world, input work is greater than output work. The difference is the energy dissipated away
due to friction. Nevertheless, the input force is less than the output force and the advantage of using the
machine is still there.
