In mathematics and computer science, an algorithm (/ ˈɛlˌɡɪrɪˈtəm / ()) is an unambiguous specification of how to solve a class of problems. Algorithms can perform calculation, data processing and automated reasoning tasks. As an effective method, an algorithm can be expressed within a finite amount of space and time and in a well-defined formal language for calculating a function.

In probability theory, the multi-armed bandit problem (sometimes called the K-or N-armed bandit problem) is a problem in which a fixed limited set of resources must be allocated between competing (alternative) choices in a way that maximizes their expected gain, when each choice's properties are only partially known at the time of allocation, and may become better understood as time passes or ...

The incremental learning derives its name from the incremental nature of the learning process. In incremental learning, all facets of knowledge receive a regular treatment, and there is a regular inflow of new knowledge that builds upon the past knowledge.

Introduction A range of factors drives clinician burnout, including workload, time pressure, clerical burden, and professional isolation [1]. Clerical burden, especially documentation of care and order entry, is a major driver of clinician burnout. Recent studies have shown that physicians spend as much as 50 percent of their time completing clinical documentation [2].

Financial crime detection has become an important priority for banks. Fraud is increasing dramatically with the expansion of modern technology and global communication, resulting in substantial losses to the businesses []. Recently, HSBC was fined by the US authorities a large sum of \$1.9bn (Â£1.2bn) in a settlement over money laundering, the largest paid in such a case [2, 3].

Gaussian Processes and Kernel Methods Gaussian processes are non-parametric distributions useful for doing Bayesian inference and learning on unknown functions. They can be used for non-linear regression, time-series modelling, classification, and many other problems.

Abstract. We use a unique administrative dataset of over 10,000 taxi drivers in Singapore to study the labor supply decisions of these drivers. Our results indicate that both intra-day and across days, cab drivers deviate from the neoclassical economic model and that their labor supply is affected by a reference level of income.

Color Reduction Introduction Color reduction is a very important aspect of ImageMagick. For example to convert a JPEG or PNG image containing millions of colors, into a GIF image containing a maximum of 256 color, you really have to be able to reduce colors in an efficient and effective way.

Label - Simple Text Label Basic Labels Creating a font image using a "label:" image, is the more typical way of drawing a font quickly in ImageMagick. The biggest advantage is that generates its own canvas according the current "-background" and "-fill" color settings, which is sized to match the drawn text. For example here is a typical generated label.
