EQUATIONS OF LINES AND PLANES IN 3-D 43 Equation of a Line Segment As the last two examples illustrate, we can also find the equation of a line if we are given two points instead of a point and a direction vector. Let's derive a formula in the general case. Suppose that we are given two points on the line $P_0 = (x_0; y_0; z_0)$

300 Chapter 12 Three Dimensions You must then imagine that the z axis is perpendicular to the other two. Just as we have investigated functions of the form $y = f(x)$ in two dimensions, we will investigate three dimensions largely by considering functions; now the functions will (typically) have the form $z = f(x,y)$.
